

MOULDGUARD FUNGICIDAL CLEANER

A multi-surface biocidal protection for wood, that kills mould before painting and decorating. Offers long-lasting protection, and continues to kill spores and mould in the woodem substrate.

KEY FEATURES AND BENEFITS

- ✓ Exterior and interior wood
- ✓ Complete biocidal protection
- ✓ Kills mould prior to decorating
- ✓ Long-lasting protection
- ✓ Continues to kill spores and mould
- ✓ Bleach free
- ✓ Kills ALL mould
- ✓ Use on internal and external wood

APPLICATION INFORMATION

Application tools Brush, roller, spray

Coverage 4-6 sqm per Litre

AVAILABLE IN

Sizes 1L,4L

First, remove surface debris and organic growth by scraping and brushing.

All wooden surfaces must be scraped to a porous surface ready for the application of MOULDGUARD Fungicidal Cleaner.

For optimal biocidal effectiveness, apply the treatment to dry surfaces. You can use a brush, roller, or spray application.

After applying the treatment, scrub the areas with an appropriate brush and let it sit for up to 20 minutes.

It may be necessary to repeat the process for heavily contaminated areas.

Ensure the MOULDGUARD Fungicidal Cleaner does not dry out if you are primarily using the product as a cleaner.

ADDITIONAL INFORMATION

Biocidal protection

When treating wood, before re-coating, allow the treatment to remain for 24 hours, to ensure the fungus/mould does not reoccur, maximising its biocidal effect by allowing the solution to penetrate the wood.

Finally, rinse or wipe down the treated surfaces with clean water to remove residues and dead growth. Allow the area to dry completely before proceeding with any further treatment.
